

COMPANY PROFILE

NorthGlass was established in 1995 with its headquarters located in Luoyang. Currently, NorthGlass has three factories in Tianjin, Luoyang, and Shanghai, with a total factory area of 170,000 square meters and an annual production capacity of 5 million square meters of deep-processed glass.

We can be innovative as we also develop and produce the best glass processing equipment in the world.

NorthGlass Cast Glass Co., Ltd. is a newly established subsidiary of NorthGlass in 2024, specializing in the research and production of specialty cast glass. The company operates a state-of-the-art factory and advanced research facility, equipped with fully automated production equipment to achieve continuous production of cast glass. We are committed to providing high-quality specialty glass solutions for our customers, driving innovation and progress in the industry.

MARKET STATUS

WHY CAST GLASS ?

The application of cast glass in architectural design is steadily expanding.

Its unique artistic appeal adds a refined, artistic atmosphere, making it visually striking. As architects seek new elements to enhance the design aesthetics of traditionally minimalist glass, cast glass offers an additional creative dimension, enriching the overall design.

NorthGlass ADVANTAGES

Equipment Advantages:

NorthGlass boasts a solid foundation in the glass deep processing equipment industry and has pioneered the first continuous cast glass production line in the industry. This allows for large-scale production, with the capacity to fire single glass pieces up to 15 square meters in size and produce cast glass units weighing up to 1.5 tons.

Production Efficiency:

The continuous cast glass production line significantly enhances production efficiency, transforming glass from handcrafted art pieces into engineered art on a mass production scale, meeting large-volume demand.
